SUMMARY

Full-Stack Software Engineer experienced in end-to-end application delivery, legacy integrations, and production support. Strong in **Java**, **Spring Boot**, **Kafka**, **React**, and DevOps workflows. Known for rapid learning, taking ownership of distributed systems, and choosing solutions that balance reliability, scalability, and real product needs.

EXPERIENCE

R&D Software Engineer — KōreroCare Platform Mar 2026 – Present
Empathic Computing Laboratory, University of Auckland Remote

- Co-led backend design for the KōreroCare mobile-wearable sensing platform, building Go/Gin-based services for time-series ingestion and cross-device synchronization.
- Designed PostgreSQL schemas for participants, studies, devices, consent, reminders, and wearable sensor streams.
- Integrated Keycloak OAuth2/OIDC with Traefik gateway routing and Docker Compose deployment for secure internal service access.
- Developed Firebase notification and reminder flows for participant engagement and study prompts.
- Modeled an HL7/FHIR-aligned data schema mapping participants, devices, and wearable measurements.

Software Engineer Intern — ISA Aviation Technology Dec 2024 – May 2025
Information Systems Associates (Pvt) Ltd Colombo, Sri Lanka

- Owned design and delivery of a distributed Spring Boot/Kafka-backed PNR ID generation service, live in production, achieving 25+ PNRs/sec at <100ms latency.
- Designed a pool-based PNR allocation model to replace legacy Oracle-sequence generation, supporting short domain-specific PNR formats while avoiding predictable sequential identifiers.
- Implemented concurrency-safe PNR allocation using a Kafka-backed pool, ensuring the same PNR was not assigned to multiple service instances, while using Java ReentrantLock for application-level critical sections.
- Led the rollout from legacy PNR generation to AeroOrder using database-driven feature toggles and a strangler-pattern migration approach for phased production cutover and fallback.
- Resolved production Kafka consumer lag and offset-reset issues by adding graceful shutdown hooks, retry handling, validation, and a Producer-Consumer refactor.
- Integrated gRPC clients and Kafka consumers into the legacy Java 8 AeroMart monolith for backward-compatible communication with AeroOrder microservices.
- Built async load-testing and monitoring support using JMeter, Prometheus, and Grafana to validate PNR/order flows, queue time, consumer behavior, and service latency.
- Added Jenkins environment support, maintained >90% unit test coverage, and coordinated delivery with QA and distributed engineering teams.

Freelance Software Engineer — Selected Client Projects May 2025 – May 2026
Client Platforms Remote / Sri Lanka

- Delivered Agrinova, a full-stack multi-branch inventory platform (Vercel, Supabase/PostgreSQL), implementing transaction-safe stock logic across 3 core workflows (issuance, returns, purchases). Live Demo 🌐
- Reduced repeat dashboard data-fetch latency from ~384ms to <1ms for cached views using React Query caching and pagination.
- Owned end-to-end client-facing fixes, resolving production authentication, version compatibility, and workflow-level validation bugs.

PROJECTS

Employee Management System [Architecture] Java 17, Spring Boot, Spring Cloud, Microservices, Kubernetes
• Built cloud-native microservices using Eureka, Gateway, RabbitMQ-based config refresh, and Resilience4j (**Circuit Breaker**, **Rate Limiter**).

GoTogether - Intelligent Travel Platform [Architecture] Next.js, Go, Spring Boot, Keycloak, Gemini API, PostgreSQL
• Developed a full-stack **Next.js** and **Spring Boot** platform featuring **AI-driven** itinerary generation via Gemini API and Keycloak OAuth2.

Event-Driven Food Delivery Platform Java, Spring Boot, React.js, Kafka, Redis, WebSockets, PostgreSQL
• Built an event-driven full-stack app combining a **React.js** UI with a **Spring Boot** backend, utilizing **Kafka** and WebSockets.

Serverless Auction Platform [Architecture] Node.js, AWS Lambda, API Gateway, DynamoDB, SQS/SNS
• Architected event-driven auction/auth services using **AWS Lambda**, EventBridge, **DynamoDB** GSIs, and custom JWT authorizers.

ZK-Rollup L2 Benchmarking Framework Rust, Solidity, TypeScript, Python, Docker
• Built benchmark pipelines with **Rust** Submitters and **Solidity** contracts, measuring **~70% lower DA cost** while raising coverage from **41% to 88%**.

More projects, architecture diagrams, and articles are available on my portfolio.

SKILLS

Backend: Java, Spring Boot, Go/Gin, Python, Node.js, REST, gRPC, GraphQL, Hibernate

Frontend: React, Next.js, TypeScript, JavaScript, React Query

Messaging & APIs: Kafka, RabbitMQ, WebSockets, Protobuf, JWT, OAuth2/OIDC

Data: PostgreSQL, MySQL, Oracle DB, Redis, Couchbase, DynamoDB, Prisma

Cloud / DevOps: AWS, Docker, Kubernetes, Jenkins, GitHub Actions, CI/CD, Linux

Observability / Testing: Prometheus, Grafana, JMeter, Gatling, JUnit, Mockito, Pytest

EDUCATION

B.Sc. (Hons) in Engineering — Computer Science and Engineering, University of Moratuwa 2022 – 2026
G.C.E. A/L: 3 A's, Physical Science Stream, District Rank 17

TRAINING & CERTIFICATIONS

CKA Training (KodeKloud, 2025) · AWS SAA-C03 Training (Udemy, 2025) · Apache Kafka Series (I, II, III) · 100 Days of DevOps (KodeKloud, 2025) · Advanced OAuth Security (Udemy, 2024)
